APPLE

48K disk
ProDOS &
DOS 3.3

Tired of hunting through dozens of disks to find the right files for your current project? Don't you wish you could rearrange all of your disk files so that different files for the same projects were on the same disks? Have you ever wanted to create better looking catalogs on your disks? Now you can do all of this and much more with DISK arRANGER!

DISK arRANGER is a collection of catalog utilities for use on the Apple II family of computers. It allows you to:

- Rearrange all entries in a disk's catalog freely;
- Sort a catalog alphabetically or by file type;
- Move files to another disk (only on machines with at least 64K of RAM);
- View and print maps of disk or individual file sectors;
- Have your disks boot up on any file, regardless of file type;
- Lock or Unlock files globally;
- Rename files;
- Create customized catalogs using inverse, flashing, or control characters.

DISK arRANGER will run on any Apple II series computer with at least 48K of RAM.
